

EaziTest Veterinary Rapid Test

– Instant Insights into Animal Health

A Convenient Tool for Animal Health Protection 🐾

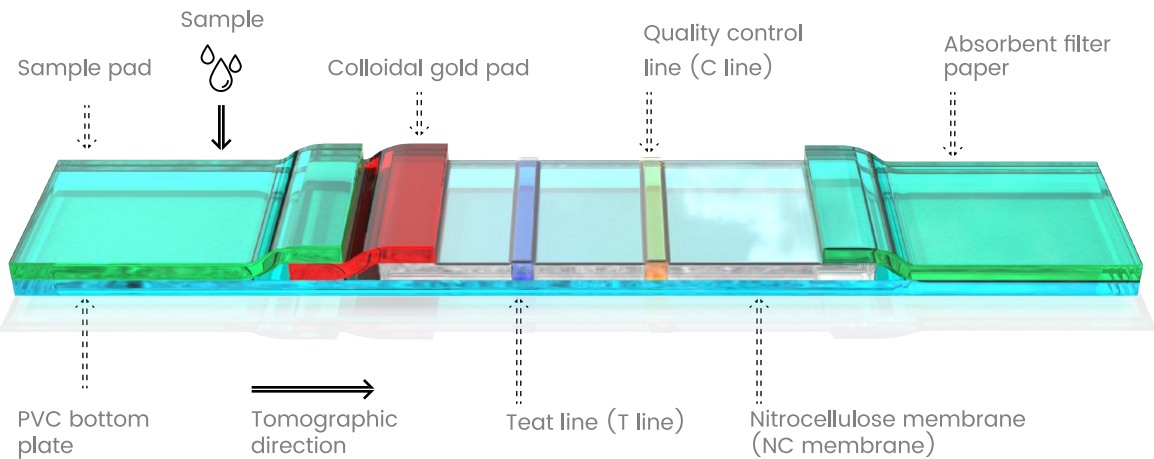

EaziTest is Vetscount Inc.' rapid test series for veterinary use which is known as point-of-care tests or lateral flow tests.

One of the primary benefits of veterinary rapid test is the ability to provide quick results, and also simple enough for non-specialized personnel to use, here we provide specialized kits available for companion and livestock animals that are affordable and can be used for routine screenings.

Technology 🐾

Highly sensitive colloidal gold immunochromatography technology. Based on the specific binding reaction between antigens and antibodies, this technology can accurately identify specific pathogens or biomarkers in animal samples. By forming clearly visible colored bands on the test card, the test results are intuitively displayed.

Fast and convenient 🐾

Compared with traditional laboratory testing methods, it does not require complex instruments and equipment and cumbersome operating procedures, and can complete the test in a short time (usually within a few minutes)

Wide range of disease diagnosis 🐾

Parasitic disease detection

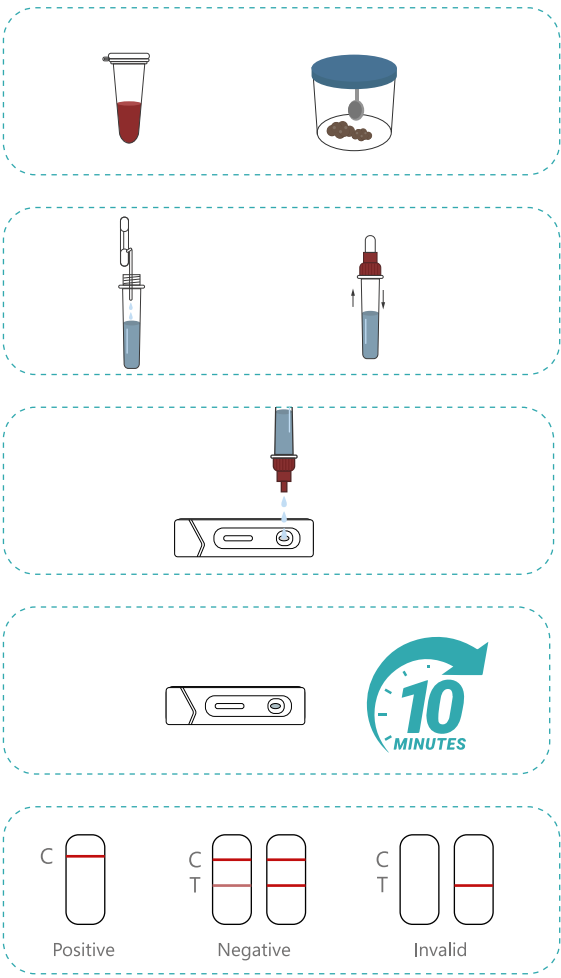

Reproductive health detection

Infectious disease detection

Simple operation process 🐾

- 1 Sample collection**
(Whole Blood/Serum/Plasma/ Secretions/ Feces/Ascites/ Cloaca, the specific sampling method is subject to actual requirements)
- 2 Add sample into the buffer** (samples of some parameters require pre-treatment), and mix completely
- 3 Add a certain amount of mixed sample**
- 4 Wait for the result** (about 10 mins)
- 5 Interpretation of results**

Reliable quality assurance 🐾

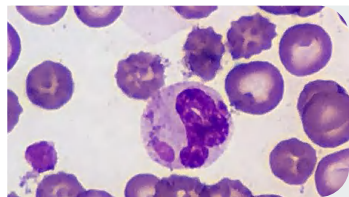

The production strictly follows high-quality standards from the selection of raw materials to the control of production processes, every link is strictly controlled.

Canine/Feline

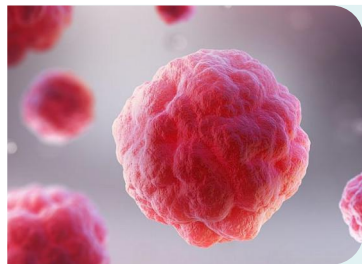

Early detection and prevention of diseases 🐾🐾

- Infectious Disease Detection

For canine:

such as canine distemper and canine parvovirus infection, EaziTest rapid test can detect viral antigens in the early stages of the disease

For feline:

such as feline distemper and feline rhinitis, are highly contagious and has a high mortality rate. In the early stages of infection, the symptoms may not be obvious or can be easily misdiagnosed as ordinary gastrointestinal discomfort. EaziTest rapid test can quickly detect feline distemper virus antigens and give results during the incubation period or early stages of the disease

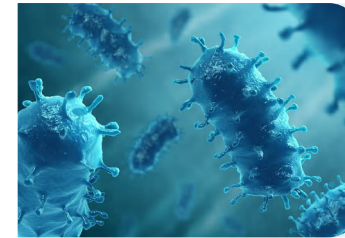

- Parasite detection:

For canine and feline:

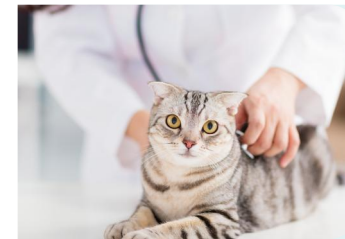

such as tapeworms and roundworms. EaziTest rapid test can detect parasite antigens in feces.

Ensure public health safety 🐾🐾

- Some canine and feline diseases are zoonotic, EaziTest rapid test can quickly detect whether the pet is infected, helping people to cut off the transmission route, thereby reducing the risk of human infection: such as rabies, brucella and toxoplasmosis etc.

Convenient for pet owners and veterinarians 🐾🐾

- For veterinarians:
EaziTest rapid test is an efficient diagnostic aid, it can quickly determine whether the pet is infected with a certain pathogen

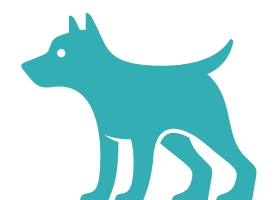

- For pet owners:
EaziTest is simple and easy to operate, and does not require complex equipment and professional knowledge. This allows owners to have a preliminary understanding of the health status of pets at home

Promote the reproductive health of canine and feline 🐾🐾

- EaziTest rapid test can be used to detect the estrus cycle and pregnancy status of female canine and feline, which has far-reaching significance for their healthy development

Rapid Test for Canine

No.	REF NO.	Product Description	Product Abbr.	Specimen	Specification
1	110922001	Canine Distemper Virus Antigen Rapid Test	CDV Ag	Secretions	10T/Kit

Porcine/Bovine/Avian

Early detection and prevention of diseases

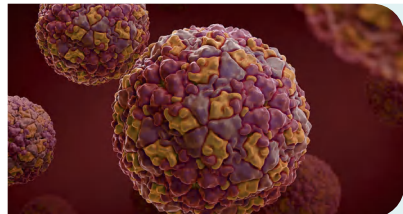

• Infectious Disease Detection

For Porcine:

Diseases such as African swine fever and swine fever are highly contagious and destructive.

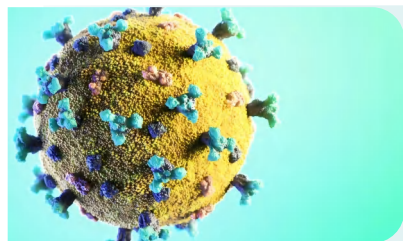

For Bovine:

Diseases such as foot-and-mouth disease, bovine viral diarrhea, and infectious bovine rhinotracheitis

For Porcine and Bovine:

Some chronic infectious diseases such as porcine circovirus disease and bovine brucellosis, may have hidden symptoms in the early stage of infection, but will gradually affect the growth and reproductive performance of animals.

For Avian:

In poultry farming, diseases such as avian influenza and Newcastle disease are highly contagious and have a high fatality rate, but in the early stage of avian influenza, poultry may only have slightly reduced spirits.

EaziTest rapid test can detect viral or bacterial antigens and antibodies in the early stages of the disease, even when clinical symptoms are not obvious

Adapting to modern breeding and regulatory needs

Modern breeding management:

EaziTest rapid test is just suitable as a tool for daily disease screening on farms

Government supervision assistance:

EaziTest rapid test can be used as a means of on-site rapid detection

Rapid detection for zoonotic, timely prevention and control of epidemic transmission

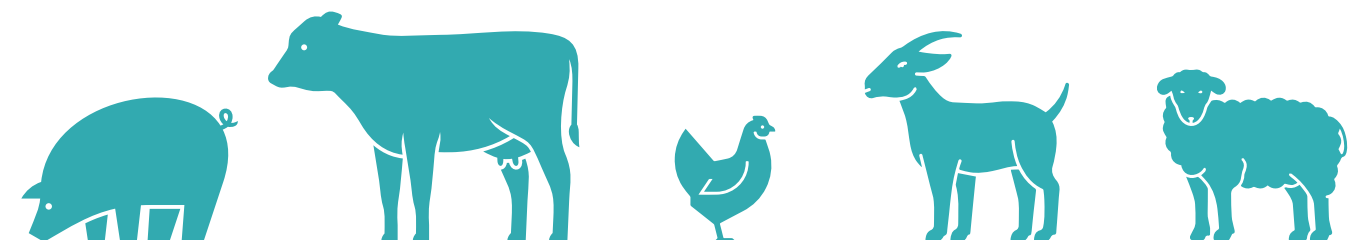

Avian influenza is a serious zoonotic infectious disease. Avian influenza viruses usually spread among poultry and birds and can also infect humans.

Brucellosis is a chronic zoonotic infectious disease that is extremely harmful to the reproductive system of bovine, and for especially high-risk groups such as cattle breeders, veterinarians, and slaughterhouse workers.

EaziTest Rapid test can accurately detect the virus when avian only shows some non-specific symptoms (such as slight coughing and fluffy feathers) in the early stage of the avian influenza epidemic, and can also isolate sick bovine in time to prevent the further spread of the disease.
